

How does Dr. Hoffman treat metabolic syndrome?

Dr. Hoffman believes that in many cases, while judicious use of drugs sometimes is needed to control symptoms, nutrition, diet change, supplementation and, where appropriate, use of bioidentical hormones are essential to full resolution of health problems.

What results can you expect? Depending on the severity of your condition, our program can enable your conventional medications to work better, be partially tapered or, in the best case scenario, be discontinued altogether.

Depending on your condition, some or all of the tests, supplements or therapies described here will be employed in treating you, and others may be ordered. Care at the Hoffman Center is highly individualized, and no two patients are alike.

Request Information from the Hoffman Center to have a member of our staff contact you.
